Pre-Doctoral Residency in Pediatric Psychology

2021-2022

Department of Psychology
The Hospital for Sick Children, Toronto, ON, Canada

The Hospital for Sick Children Pre-Doctoral Residency in Paediatric Psychology is accredited with the Canadian Psychological Association (2017/2018-2023/2024).
Overview

**Three pre-doctoral residency** positions in pediatric psychology are offered through The Department of Psychology at the Hospital for Sick Children (SickKids). The one-year, full-time training position begins on **September 1, 2021**. Employment is contingent upon meeting the Hospital for Sick Children’s Occupational Health Requirements.

The full-year pre-doctoral residency program was initially accredited with the Canadian Psychological Association¹ (CPA) in 2001 and was most recently accredited by the CPA for a 6 year term (2017-2018 until 2023-2024). The residency standards from CPA for application, rotations and delivery of the program are followed.

Our overall goal is to prepare the resident for the varied demands of professional practice in psychology -- skills that are readily transferred to a wide range of community settings. To learn more about our department and residency program, please visit: [http://www.sickkids.ca/Psychology/Education-and-learning/Predoctoral-internship-program/index.html](http://www.sickkids.ca/Psychology/Education-and-learning/Predoctoral-internship-program/index.html)

The philosophy of the residency mirrors that of The Hospital for Sick Children with the needs of the patient and family being central. An evidence-based/best practice approach is used and clinical research is closely integrated with patient care activities. Conceptualizing the child’s cognitive and psychosocial needs and challenges within a developmental framework is integral to practice.

The Department of Psychology exists as an independent department within a Child Health Services cluster model of service provision and includes approximately 28 psychologists made up of individuals specializing in neuropsychology, clinical and health psychology, 10 psychometrists, and numerous research staff providing services and conducting research within the hospital. In addition to clinical training at the residency level (3 positions, accredited by the Canadian Psychological Association), the Department offers clinical training at the post-doctoral level in Pediatric Neuropsychology (2 positions), Pediatric Health Psychology (2 positions) and graduate practicum level.

COVID-19 Impact on Training

Since the onset of the COVID-19 pandemic, the residency program and faculty have navigated the uncertain landscape with flexibility prioritizing clinical care, training and safety. Responses to the global pandemic continue to evolve and, at the time of writing this brochure, a hybrid model of care (combination of in-hospital and virtual) is being provided. It is unclear the degree to which similar arrangements will be in place for the 2021-2022 training year.

At the time of writing, ambulatory (out-patient) clinical services are not operating at full capacity due to the COVID-19 pandemic. This has impacted the nature of training opportunities available to current residents, and their experiences were adjusted to meet training goals to the best of our ability. From mid-March until July 2020, all training took place remotely through secure videoconferencing technology. Activities included outpatient individual and group intervention, assessment, interviewing/feedbacks, research consultation, supervision, team meetings, didactic seminars and case presentations. As of July 2020, some face-to-face training has been available with patient, staff and trainee safety being paramount.

Current residents were also involved in hospital initiatives specific to the provision of care and support during the pandemic. These included:

- **Virtual Workshop for caregivers:** Emotion Regulation & Resiliency. The workshops provide space for caregiver selfcare and compassion using mindfulness skills of emotional coaching of children/teens dealing with stressors
- **Virtual COVID-19 Brief Therapy Clinic** for patients & families. This clinic provided brief therapy treatment services, and resource counselling to patients and families.
- **Development of online resources for caregivers:** [https://www.aboutkidshealth.ca/covid-19](https://www.aboutkidshealth.ca/covid-19)

The SickKids Predoctoral Residency in Pediatric Psychology is committed to the training of future psychologists and achieving core competencies remain a priority. This brochure describes the intended program structure and rotation experiences, which may require modification depending on limitations imposed by COVID-19. While the program cannot predict with any degree of certainty how the pandemic may impact future training cycles, faculty and departmental leadership are committed to being transparent with information, collaborating with residents to develop disruption contingency plans guided by training goals, and to document adjusted goals and expectations (including supervision arrangements). Should disruptions to rotations occur in the future, potential and current residents will be notified as soon as information becomes available.

Residents are expected to comply with any and all federal, provincial, and SickKids organization regulations including but not limited to wearing Personal Protective Equipment, maintaining appropriate physical distancing, abiding by travel restrictions, quarantining, and other Infection Prevention and Control procedures within the context of providing clinical services, or otherwise.

Please see the Application Process section at the end of this brochure for more information about the impact of COVID-19 on training experience
Goals of the Residency

The goal of our program is to prepare developing professionals with the skills, abilities and knowledge base to work within the scientist-practitioner model. Residents will gain experience with children of all ages who present with psychological problems related to congenital, perinatal, or acquired medical conditions, or mental health issues. Residents are exposed to a wide array of patient populations in both inpatient and outpatient settings. Graduates of our program have held post-doctoral fellowship positions, roles in academic medical centers, academic settings, school boards, multi-disciplinary community clinics, and private practice.

Through their residency, trainees develop an increased awareness of, and acquire skills with respect to diagnosis, assessment, consultation, treatment, and professional and ethical issues. These general goals are met through weekly supervision within each rotation, and meetings with the director of training and selected staff.

Specifically, over the course of the residency, residents will be exposed to the following:

I. **Ethical considerations and professional conduct.** Discussions will refer to the Canadian Code of Ethics for Psychologists, the APA Ethical Principles of Psychologists, and the Standards of Professional Conduct to explore real and hypothetical situations that challenge health care professionals.

II. **Jurisprudence.** Psychologists in Ontario are regulated by legislation that governs the practice of psychology. These laws and their regulations will be reviewed with special consideration given to how they affect professional practice. Situations in which the law and the code of ethics might conflict will also be discussed.

III. **Role and unique contribution of psychologists in a pediatric medical setting.** Ways in which psychologists can work effectively within the culture and behavioural expectations of a tertiary/quaternary care pediatric medical setting will be addressed. This will provide a contrast to the ways in which psychologists work within mental health and adult settings.

IV. **Effective communication with medical staff, colleagues, patients and families.** Different types of communication are required when dealing with various parties: professional staff, patients, families and other 'consumers'. Methods for communicating information appropriate for different parties will be addressed.

V. **Evidence-based care within a scientist-practitioner model.** The best care is that which is proven to be most effective and cost efficient. Residents will be taught to determine the best methods for assessment and intervention, based on valid research and outcome studies.

VI. **Continuing education as an ongoing component of professional practice.** Residents will learn the responsibility of self-directed learning as a life-long process. They will be encouraged to seek additional educational opportunities throughout their careers.
Program Structure

Clinical training will consist of assessment, intervention and consultation for a wide range of pediatric disorders and illnesses seen in a tertiary health care centre (ages 0-18 years). Each resident selects 3 or 4 supervised rotations during the year, one from each of 3 thematic areas:

- **Assessment:** Neuropsychology: Assessment and Programming OR Diagnostic/Learning and Academic Interventions
- **Intervention:** Pediatric Clinical and Health Psychology
- **Clinical Research**

**Each rotation comprises 20 hours per week for 6 months.** The resident will choose to emphasize either **intervention** or **assessment** by working in that rotation two days a week for the entire year. If the resident elects to emphasize intervention, they will typically work in the same intervention rotation for the entire year and will have a total of 3 rotations. This allows the resident to carry longer term cases and to attain a higher level of independence in their therapy skills over the training year. Should a resident elect to emphasize assessment, they will change rotations mid-year in order to gain experience with different populations, different assessment techniques and different supervisors resulting in a total of 4 rotations.

Within each rotation, residents are offered an appropriate degree of independence in meeting the clinical demands so that their current skills will be broadened and enhanced and their knowledge base increased.

Residents meet with the Residency Coordinator on a regular basis. In this setting, there is an opportunity to share and discuss ethics and experiences within the context of specific rotations, and to deal with individual issues as they arise. Over the course of the residency, the types of issues dealt with in these joint meetings will reflect the increasing autonomy and responsibilities expected of the developing trainee. The goal of these meetings is to enhance the professional growth and development of residents.

Rotations

Clinical training will consist of assessment, intervention and consultation for a wide range of pediatric disorders and illnesses seen in a tertiary health care centre (ages 0-18 years). Rotations are offered to allow the resident to work with a diverse range of patients under the supervision of various staff psychologists, to provide service across multiple programs, and to participate in focused research.
Assessment

All assessment rotations offered include the following common learning objectives. The resident will gain experience in:

- Administering a broad range of assessment tools, including cognitive, academic, psychosocial, behavioural, and functional measures
- Conducting comprehensive patient and family interviews
- Integrating and communicating information from the history, observed and reported behaviour, test results and school performance in the context of brain-behaviour relations through report writing and clinical feedback
- Providing consultation to members of the multidisciplinary team, families, schools, and other community agencies
- Developing recommendations for effective treatment management strategies, educational planning, and advocating for appropriate community-based resources
- These objectives are also facilitated through directed reading, structured supervision based on clinical cases and developmental neuropsychological principles, as well as attendance at team meetings, outpatient clinics, and multidisciplinary clinical and research rounds. Supervision is available from a range of faculty, many of whom are ABPP-cn credentialed.

Intervention

Intervention rotations in clinical/health will all include the following core learning objectives. The resident will gain experience in:

- Formal diagnostic interviewing, report writing, and feedback to patients and families.
- Treatment with individual clients, family, and parenting sessions
- Treatment of comorbid conditions
- Learning to integrate psychological data with questionnaires and parent interview data, case formulation, feedback and report writing
- Working within an interdisciplinary team
- Being supervised through role-modelling, demonstrate, coaching, case conceptualization
- Actively participating in clinic rounds, seminars and case presentations

Therapeutic orientations include:

- Cognitive Behavioural Therapy
- Motivational Interviewing
- Behaviour Modification
- Play and Art Therapy
- Acceptance and Commitment Therapy
- Mindfulness
- Family psycho-education, parent skills

Research

The Hospital for Sick Children is an active and exciting research environment. Research in Psychology at SickKids includes:

- Characterizing impact of adverse insults on development
- Understanding the core deficits associated with medical and neurodevelopmental disorders
- Program development of evidence-based intervention for children treated with acute or chronic medical conditions
- Program development and evaluation to optimize transition to adult medical care
- Identifying relationships between neuroimaging measures of brain structure/function and neurocognitive outcome

and more…

Most Staff Psychologists at SickKids are actively engaged in clinical research as well as clinical practice, and research-based rotations are arranged individually.

Other Training Opportunities

Additional training opportunities may include:

- Psychological intervention and/or parenting training with medically complex patients
- Lectures and presentations within the hospital or for community groups
- Providing supervision to more junior trainees (practicum and/or graduate students) during the latter half of the residency to develop competency in the supervisory role.

Supervision

In accordance with CPA Accreditation Standards (2011), residents will have a primary supervisor in each rotation and will receive at least 3 hours of individual face-to-face supervision and 1 hour of shared supervision per week. Regularly scheduled, one-to-one supervision will involve case review, setting and monitoring of training goals, and professional development. Supervision follows a developmental model and fellows will work with a variety of faculty members throughout the fellowship for broad exposure to different styles of clinical practice and supervision. Group professional support/supervision meetings with the Residency Coordinator also takes place on a regular basis to address topics in professional/ethical standards, professional practice issues, cultural and individual differences, and diversity.
Didactics

A variety of formal and informal educational opportunities exist at SickKids. Since the onset of the pandemic, they have been made available online, virtual access (e.g., Microsoft Teams, Zoom for Healthcare). A monthly Advanced Psychology Seminar day has been developed to provide residents with protected time to develop and enhance their clinical skills. Rotation-specific readings will be suggested by individual faculty. Sample format below:

<table>

<td>Professional Practice Issues</td>
</tr>
<tr>
<td>3:00-4:00</td>
<td>Didactic (e.g., assessment, research)</td>
</tr>
</tbody>
</table>

In addition, residents will be expected to attend:
- Psychology Department Rounds (monthly)
- Greater Toronto Area (GTA) Psychology Seminars (5/year). The goal is to provide didactic and networking opportunities to residents across the GTA with a view toward providing connections as they move into their early professional careers. These will be offered virtually during the 2020-2021.

Optional
- Directed Neuropsychology Readings
- Clinical Health Evaluative Science (CHES) Rounds
- Brain and Behavior Cross-Talks
- Neuroscience and Mental Health Program (SickKids Research Institute) Symposia
- Pediatric Grand Rounds
- Clinical and research rounds associated with individual rotations (e.g., Neurology, Neurosurgery, Hematology/Oncology, Psychiatry)

Evaluation

The evaluation process is designed to be dynamic and proactive. The goals of the evaluation process are to optimize the residency experience for each trainee, to provide constructive feedback, and ensure that all residents attain their personal goals and the goals of the program.

In an effort to monitor the Residency Program and to ensure its excellence, we also strive to obtain feedback from each resident. In addition to the scheduled meetings outlined below, *ad hoc* meetings will be arranged as necessary. The Director of Training provides leadership in the evaluation process and is responsible for its integrity. Formal written progress evaluations are prepared by the training faculty staff at the mid-point and conclusion of each rotation based on pre-determined goals. Residents whose performance is not at an expected level of competence will be advised
regarding the problem areas in their performance, and a specific plan to remediate those weaknesses will be developed.

**Facilities**

The department has office and bookable testing space and all staff, including residents, have access to secure online platforms (e.g., Microsoft Teams, Zoom for Healthcare, OTN – Ontario Telemedicine Network, REDCap, Q-Interactive). Since the pandemic, SickKids Infection Prevention and Control procedures have been enacted with a priority placed on patient and staff safety.

Residents have access to a large shared office space where appropriate physical distancing can be maintained although, whenever possible, scheduling to ensure limited onsite presence will be coordinated. Each resident has an individual desk space, computers and access to administrative support and access to bookable office space for individual assessments or therapy. Other resources in the department include an observation/interview room with a one-way mirror, a group therapy room and test library. Residents have access to individual computers, private phone line and access to electronic medical journals through the University of Toronto Library.

**Stipend and Benefits**

**The stipend for the 2021-2022 year is $31,500 CAD.** Residents are eligible for the modified SickKids benefits package (health and dental), 3 weeks paid vacation, 9 statutory holidays recognized by the hospital, 2 paid “float” days, and paid professional development leave. A $500.00 professional development fund is provided for each resident to be used for attendance at scientific conferences or professional development activities.

**Eligibility**

For consideration, applicants are required to meet all of the following minimum criteria by the application deadline.

- Enrollment in a doctoral program in clinical psychology accredited by the Canadian and/or American Psychological Associations.
- Completion of a master’s degree (or equivalent), all compulsory doctoral course work, comprehensive examinations, and approval of dissertation proposal.
• Completion of at least 600 hours total of supervised practicum experience. Preferably this include at least 300 hours in face-to-face patient/client contact (interviewing, assessing, or intervening with clients directly) and 150 hours of supervision. *However, given the COVID-19 pandemic some flexibility in the composition of those hours will be considered as long as there is a minimum total of 600 hours in direct contact, supervision, and support activities combined.*

A broad range of academic and practical experience, particularly with respect to child assessment and treatment is valuable. Applicants who bring diversity to the program (e.g., fluency in French/other languages or experience with under-served populations) are especially encouraged to apply. In accordance with Canadian immigration requirements, preference is given to applicants who are Canadian citizens, or permanent residents of Canada.

**Application**

Our program uses the APPIC standard application, available on-line at [http://www.appic.org/](http://www.appic.org/). The application package includes a form entitled "Verification of Residency Eligibility and Readiness" which must be completed by the Graduate Program Director of Training and submitted as part of the application.

**Required supporting materials include:**
- Cover letter stating applicant’s professional plans and special interest in the SickKids Residency Program (or refer to APPIC application essays)
- Curriculum Vitae
- Official transcripts of graduate transcripts
- APPIC Verification of Residency Eligibility and Readiness form
- Three (3) letters of reference (using the standardized APPIC reference form). At least two (2) letters should be from supervisors familiar with the applicant’s clinical skills.

**Deadline for submission of applications is 11:59 p.m., EST on 1st of November each year.**

Applicants who have had placements and / or requirements that were negatively impacted by the COVID-19 pandemic are encouraged to have their Director of Clinical Training highlight the nature of this impact in their portion of the APPI application. If placements were cancelled or prematurely terminated, applicants are encouraged to describe the training and hours that were anticipated in their cover letter. Please be assured that those situations will be taken into consideration on a case-by-case basis. The minimum requirements described will remain in place. As well, in keeping with the new APPI form, telepsychology interaction (telephone or virtual video conference) is considered equivalent to face-to-face patient/client contact.

The Psychology Residency Program at SickKids conforms to the guidelines of the Association of Psychology Postdoctoral and Residency Centers (APPIC) and is also a
member of the Canadian Council of Professional Psychology Programs (CCPPP). We participate in the Computer Matching process sponsored by APPIC. All applicants must register with the National Matching Services (www.natmatch.com/psychint) and/or APPIC (www.appic.org/) to be considered. Completed applications are rated independently by members of the Residency Committee and are ranked. This residency site agrees to abide by the APPIC Policy that no person at this training facility will solicit, accept or use any ranking-related information from any applicant.

Copies of the APPIC application forms can be found at [www.appic.org](http://www.appic.org).

The Hospital for Sick Children Program Code Number: 181811.

- Candidates will be notified on the [CCPPP Universal Notification Date](https://ccppp.ca/) regarding whether or not they are being offered virtual interviews (video or telephone).
- Interviews will be conducted during the 2nd and 3rd weeks of January 2021.
- The matching process is completed through the National Matching Service.

In accordance with federal privacy legislation ([Personal Information Protection and Electronics Documents Act](http://laws.justice.gc.ca/en/P-8.6)), only information that is required to process your application is collected. This information is secured and is shared only with those individuals involved in the evaluation of your residency application.

**Information about SickKids and Toronto**

The Hospital for Sick Children (SickKids), affiliated with the University of Toronto, is recognized as one of the world’s foremost pediatric health-care institutions. It is Canada’s leading centre dedicated to advancing children’s health through the integration of patient care, research and education. To learn about the SickKids Strategic Plan 2020-2025 “Unprecedented outcomes powered by Precision Child Health” please see: [https://2025.sickkids.ca/](https://2025.sickkids.ca/)

With a staff that includes professionals from all disciplines of health care and research, SickKids provides the best in complex and specialized care by creating scientific and clinical advancements, sharing knowledge and expertise and championing the development of an accessible, comprehensive and sustainable child health system. The Peter Gilgan Centre for Research and Learning is a hub where researchers and
learners can congregate and share ideas to transform the current state of child health care since its 2013 opening.

SickKids is located in downtown Toronto, Canada’s largest city. Toronto lies on the shore of Lake Ontario, the easternmost of the Great Lakes. Over 4 million people live in the Greater Toronto Area (GTA). Toronto is a clean, safe, cosmopolitan city with a wonderful network of parks, recreational, and cultural facilities. For more information: www.seetorontonow.com
